Ram Sundara Raman is an Assistant Professor in Computer Science and Engineering at the University of California, Santa Cruz. Ram's research lies in the intersection of computer security, privacy, and networking, employing empirical methods to study large-scale Internet attacks such as Internet censorship, and building privacy-enhancing tools. Ram obtained his PhD in Computer Science and Engineering from the University of Michigan. He has been recognized as a Rising Star at the Workshop on Free and Open Communications on the Internet (FOCI), and was awarded the IRTF Applied Networking Research Prize in 2023. His work has helped produce one of the biggest active censorship measurement platforms, the Censored Planet Observatory, and has helped prevent large-scale attacks on end-to-end encryption.
